

AT A GLANCE

PROJECT NAME

- Kensington House

PROJECT LOCATION

- Kensington Road, London

MAIN CONTRACTOR

- Carl Buxton Flow Screeds

CEMFLOOR SUPPLIED

- Cemfloor FSC 531 Fibre

CEMFLOOR INSTALLED BY

- Carl Buxton Flow Screeds

PROJECT DETAILS

Our newest product Cemfloor FSC 531 Fibre Reinforced Levelling Compound was the product of choice for this project.

Using our Cemfloor Mobile Mix truck, it was supplied to Carl Buxton at Buxton Flow Screeds, and expertly installed within 3 hours.

Cemfloor FSC 531 Was Chosen Thanks To Its Many Benefits:

- Weight saving properties - Cemfloor FSC is only 1.7 ton compared to standard liquid screeds
- Using a low profile UFH system, the 531 Fibre allowed meant the contractor could go 15mm above pipe meaning lower depths were achieved.
- Using the new Cemfloor Mix Mobile Truck, 20.7t was poured in under 3 hours. Using a traditional 25kg bagged system this would have taken up to 4 days
- Delivery via the truck eliminated the need to lift and store pallets on site, and less dust on site reduced H & S hazards
- The simplified application process made the installation less labour intensive, gave consistent quality and saved the customer time and money.
